

Dear Professor. Dr. Awang Ahmad Sallehin Husaini,

I am Beatrice Chong Chee Leong, with a matric number of 64667, one of the students in biochemistry class group 2, which is under your teaching. This email is done to complete the last task (task 11) of my e-Portfolio milestone.

Just as the definition, biochemistry is the chemical explanation of the biological reaction happening inside an organism: it involves reactions equations, kinetics, reaction mechanisms buffer, concentration of reactant and product, and all other terms that are also used to explain chemistry. Besides, the topics are moving from fundamental to the most complex. Moving from the eukaryotes, prokaryotes and organelles until the complex reaction which takes place inside the cells: glycolysis pathway, Krebs cycle and electron transport system. Not to forget the importance of balanced diet consist of protein, carbohydrate, lipids and vitamins, and moving to their specific functions in the body: the build-up of biological membrane from sphingolipids and glycerophospholipid; the formation of myoglobin, cartilage and even enzymes from protein; coenzymes derived from vitamins which required in activity of enzymes; and glucose from carbohydrates which involve in the production energy for cellular metabolism. Overall, these are part of the knowledge I had retrieved for this subject.

In this email, I would be glad to express my gratitude for the dedication of teaching and knowledge that had been shared to us especially in this challenging semester where online class is the new normal. It is a great pleasure for me to enrol your class and learn something from them. In my point of view, understanding is the key point to learn a subject, especially a wordy factual subject like biology; which in this case I will refer to biochemistry. Hence, a clear-explanation-with-ample-examples kind of teaching is what I am expecting in every class which I am glad that it correlates to your teaching method.

This is all from me, thank you so much.

Sincerely,

Beatrice Chong Chee Leong @ Micheal
